

Juven[®] case study

Breast Cancer– Fungating Wound

Patient History Condition

Nancy, 44-year-old female

Diagnosed with stage 3B infiltrating ductal breast cancer in November 2004

Chemotherapy was unsuccessful and tumor had progressed into an ulcerated mass covering almost half of her breast and portions of the anterior chest wall. Nancy had been living with the open wound for 1 year

During radiation treatment

- Radiation treatment began on September 1, 2005 (5 times/week for 6 weeks)
- 2 packets of Juven were added to her daily nutrition plan on September 15

7 days of Juven therapy*

- Regeneration of tissue noted on September 22

28 days of Juven therapy*

- Wound completely closed
- Radiation treatment completed on November 2 (70 Gy total)

After 28 days of Juven therapy, Nancy's wound closed.*

*Juven has been clinically shown to support building new tissue at wound site within 2 weeks.
