

Juven[®] case study

Loss of Lean Body Mass Due to Chemotherapy

Patient History Condition

Dave, 54-year-old male

Diagnosed with stage IV colon cancer

Underwent partial colectomy followed by chemotherapy every 3 weeks. Weight had declined 60 pounds. Also experienced loss of LBM, including loss of appetite, early satiety, weight loss, weakness, fatigue, lack of strength and energy, and decreased performance status

Before Juven therapy

- Prior to surgery, Dave weighed 225 pounds
- 8 weeks post surgery, prior to chemotherapy, Dave weighed 180 pounds (-45 pounds)
- After surgery and 2 months of chemotherapy, Dave weighed 165 pounds (-60 pounds)
- Hemoglobin level was 10.6 g/dL

2 weeks of Juven therapy

- Dave gained 11 pounds (weighed 176 pounds) and his quality of life was improving
- Hemoglobin level was 11.7 g/dL

5 months of Juven therapy

- Dave maintained his weight (176 pounds) and continued on chemotherapy
- Hemoglobin level was 13.7 g/dL

Within 2 weeks, Juven therapy helped Dave gain 11 pounds. The weight gain helped him sustain his treatment.*

*Juven has been clinically shown to support building LBM in as little as 4 weeks.

Where to find Juven®

At the Abbott Store

- Online at www.abbottstore.com
- By phone at 1-877-GO-JUVEN
(1-877-465-8836)
